

How to Navigate Your Water Meter

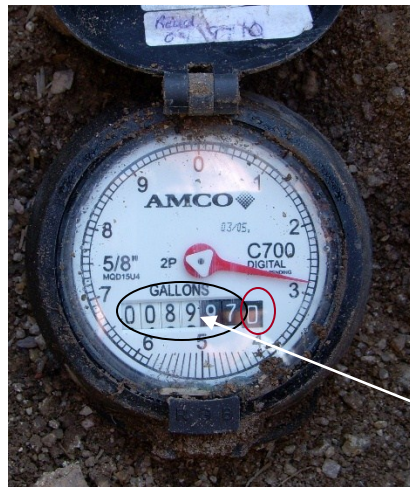

This is your ERT (Encoder Receiver Transmitter) Number.

This unit transmits your water usage signal each month to our receivers. It is VERY important to keep it upright and clean of debris. This will ensure your meter will be read and transmitted correctly for billing. Report all loose and chewed wires!

This is your Meter Number.

This is your Meter Reading.

The dial indicates gallons used. The revolving numbers represent 10's of gallons consumed since the meter was installed. The zero on the right is fixed. When reporting meter readings to the Utilities Department, only give us the first 6 numbers (not the last zero).

Picture Perfect Looking Meter Box-

Does your Meter Box look like this? Meter boxes should be kept free of dirt and rocks.
